<u>NOTES</u>				
<p>A. Absolute Maximum Value.</p> <p>B. The tube shall be of the post deflector accelerator type. The design shall be such that a change of + 10% in the Va2 voltage shall not produce an appreciable change in the cut-off voltage.</p> <p>C. When viewing the screen with the tube positioned such that the keyway on the base spigot is at 30° to the left of the vertical, a positive voltage on Pin 5 will deflect the spot to the right, and a positive voltage on Pin 8 will deflect the spot upwards.</p>
