#### CHARACTERISTICS RANGE VALUES

Under conditions with dc supply voltage (E) across a voltage divider providing 1/10 of E between cathode and dynode No.1; 1/10 of E for each succeeding dynode stage; and 1/10 of E between dynode No.9 and anode.

Made by Corning Glass Works, Corning, New York.

- C Made by Amphenol Electronics Corporation, 1830 South 54th Avenue, Chicago 54, Illinois.
- Made by James Millen Manufacturing Company, 150 Exchange Street, Malden 48, Massachusetts.

Averaged over any interval of 30 seconds maximum.

- f Under the following conditions: The light source is a tungsten-filament lump having a lime-glass envelope. It is operated at a color temperature of 2870% and a light input of 10 microlumens is used.
- Older the following conditions: Light incident on the cathode is transmitted through a filter (Corning C.S. No.3.67, Glass Code No.3482-Manufactured by the Corning Glass Works, Corning, New York) from a tungstenfilament lamp operated at a color temperature of 28700 K. The value of light flux incident on the filter is 10 microlumens. Supply voltage (E) is adjusted to give an anode current of 50 microamperes.
