

5AGP-

The DuMont Type 5AGP- is a 5-inch diameter, flat face, single beam, post accelerator, electrostatic deflection and focus cathode-ray tube designed for oscillographic applications. Deflection plate and accelerator leads are brought out through the neck for reduced capacitances.

D3 and D4

29.5 to 40.5 Volts DC/Inch/KV of Accelerator Voltage

Resistance in any Deflecting-Electrode Circuit ⁷ 5.0

NOTES

- 1. For any value of beam current.
- Visual extinction of the undeflected, focused spot.
- 3. Measured in accordance with MIL-E-I specifications with a beam current of 25 µADC.
- 4. With Ec1 adjusted to avoid damage to the screen, with each deflecting-electrode connected to the accelerator, and with the tube shielded, the undeflected spot will fail within a 15 mm square concentric with tube face.
- 5. With a raster pattern the size of which is adjusted so that the widest points of a pattern just touch the sides of a 3.075-inch square, no point on these pattern sides will lie within an inscribed 2.925-inch square.
- 6. The deflection factor (for both D1D2 and D3D4 plate pairs, separately) for any deflection of less than 75% of the useful scan will not differ from the deflection factor for a deflection at 25% of the useful screen by more than the indicated value.
- 7. It is recommended that the deflection-electrode circuit resistance be equal.

Max. Megohms
