

DUMONT
CATHODE-RAY TUBE

TYPE 7BDP-

The Du Mont Type 7BDP- is a 7-inch diagonal square face, five beam, electrostatic deflection and focus cathode-ray tube. Each beam is independently controllable, utilizes limited available scan with increased deflection sensitivity in the D3D4 direction and is so positioned that they scan separate areas of the screen. The deflection electrode and acceleration electrode connections are brought out through the bulb wall to minimize lead inductance and capacity and to improve insulation. A collar or ring base provides ease of connection to these leads.

GENERAL CHARACTERISTICS¹

Electrical Data

Focusing Method	Electrostatic
Deflecting Method	Electrostatic
Direct Interelectrode Capacitances	Max.
Cathode to all	6.0
Grid No. 1 to all	5.8
D1 to D2	2.5
D3 to D4	2.9
D1 to all	7.8
D2 to all	7.8
D3 to all	7.2
D4 to all	7.2

GENERAL CHARACTERISTICS (MECHANICAL DATA) (Continued)¹

Collar and Base Alignment:

Collar Pin No. 1 and Base Key each aligns with
the D3D4 trace

± 10 Degrees

Positive voltage on D3 deflects the beam towards the Index pin of the Ring Base

Positive voltage on D1 deflects the beam approximately towards Pin 6 of the Ring Base

Bulb Contact Alignment:

Bulb Contact Aligns with D3D4 trace

± 10 Degrees

Bulb Contact on same side as Base Key and Collar Pin No. 1

Bulb Contact located on Tube Center Line

± 1/4 Inch

Bulb Wall (with contact) aligns with D1D2 trace

± 3 Degrees

Trace Alignment:

D1D2 trace aligns with D3D4 trace

90 ± 2 Degrees

Corresponding traces align within

2 Degrees

NOTES

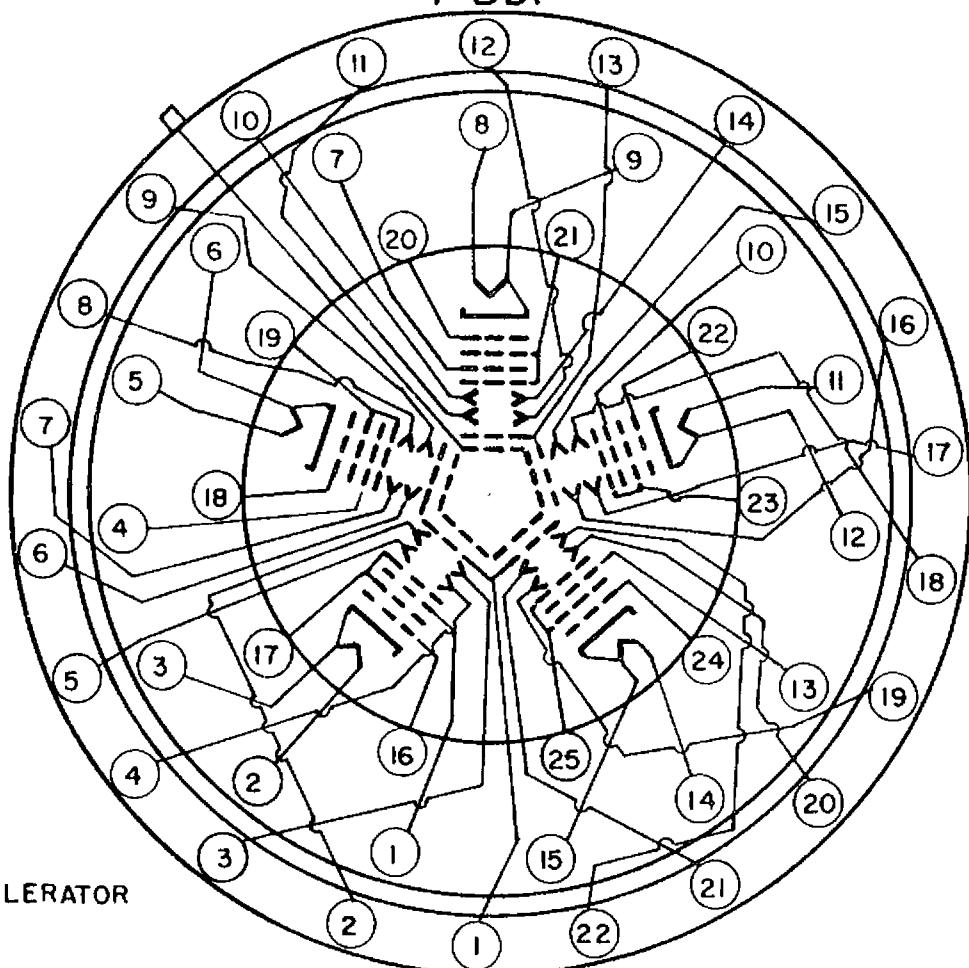

1. Values are for each unit unless otherwise stated.
2. Following the bulb contour.
3. Accelerator power input (avg.) should be limited to six watts.
4. This tube is designed for optimum performance when operating at an Eb3/Eb2 ratio of 2.0. Operation at other ratios of Eb3/Eb2 may result in changes in deflection uniformity and pattern distortion.
5. Visual extinction of the undeflected, focused spot.
6. The increase in Grid No. 1 voltage from cut-off to produce an Ib3 of 50 μ ADC.
7. Measured in accordance with MIL-E-1B specifications using an Ib3 of 25 μ ADC.
8. The deflection in this direction is limited to $\pm .75$ min. Inches from the undeflected spot position.
9. Measured in accordance with MIL-E-1B specifications.
10. Centered about normal undeflected spot position.
11. The deflection of one beam when balanced DC Voltages are applied to the deflection electrodes of the other will not be greater than the indicated value.
12. It is recommended that the deflecting-electrode circuit resistance be approximately equal. Higher resistance values up to five megohms may be used for low beam current operation.
